CAM-BOLT and CAM-LOCK

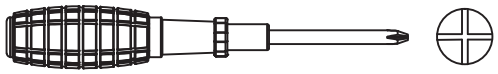

CAM-BOLT

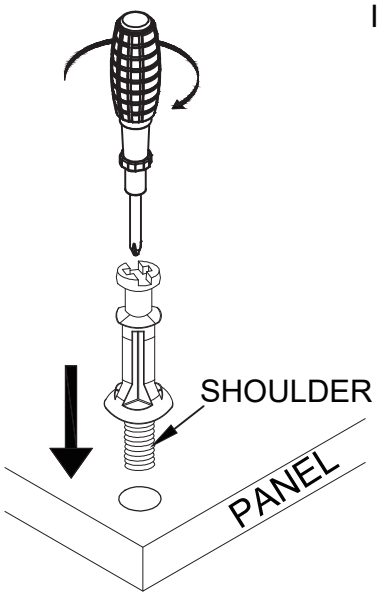

CAM-LOCK

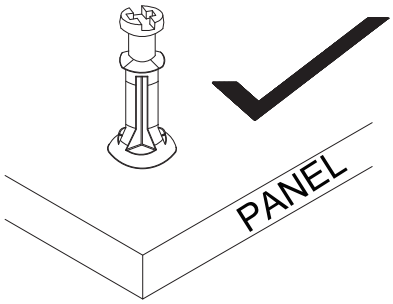

Tools Required

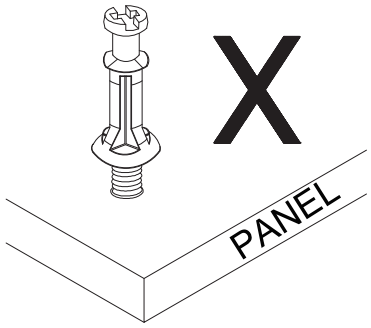

INSERTING AND TIGHTENING CAM-BOLT

Place Cam-bolt on pre-drilled hole and screw in vertically

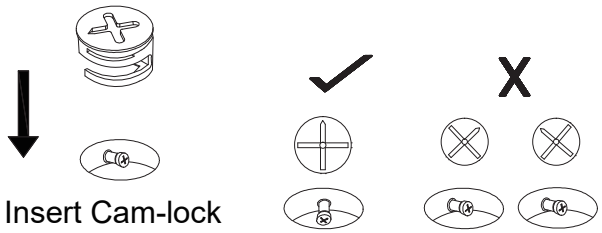

Shoulder is flushed (on the same level) with the panel.

Shoulder is above the panel.

Place Cam-bolt on the designated pre-drilled holes on the panel. Use a Phillips Screwdriver to screw-in Cam-bolt vertically until shoulder is flushed (on the same level) with panel.

INSERTING CAM-LOCK

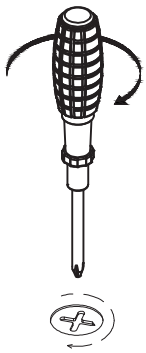

Insert Cam-lock with arrow align to Cam-bolt head

CORRECT

WRONG

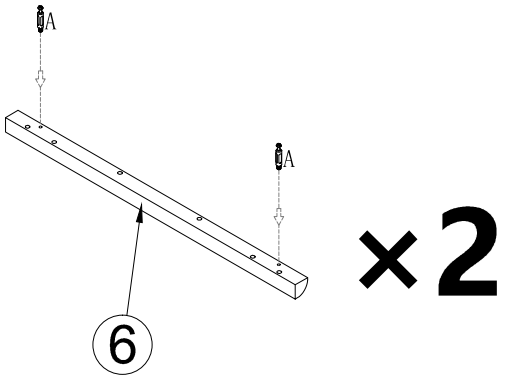

Align the arrow on the Cam-lock to the Cam-bolt head and insert the Cam-lock. Ensure Cam-lock is fully inserted.

TIGHTENING CAM-LOCK

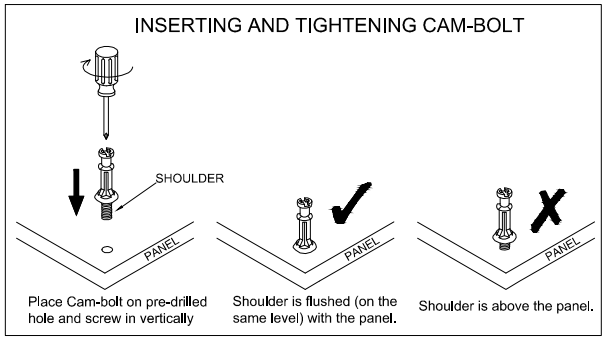

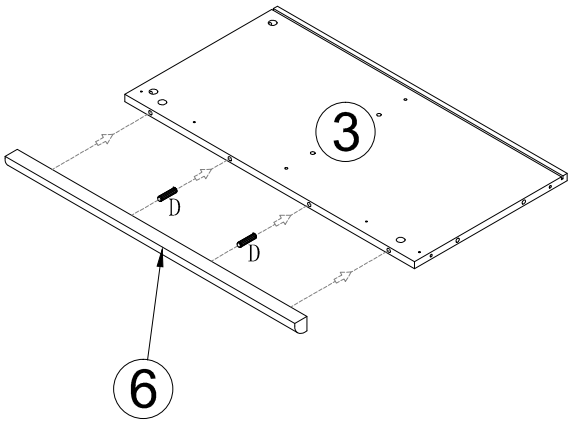

Use a Flat-head Screwdriver to turn Camlock clockwise so it locks onto the head of the Cam-bolt. Turn until it is snug (about 3/4ths of a turn) -- over-tightening could damage Cam-lock or/and Cam-bolt.

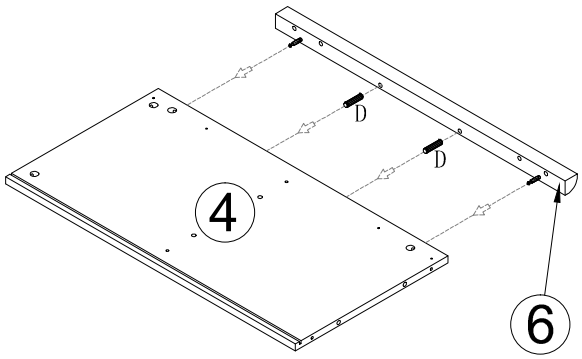

STEP 1

STEP 10

Description: Insert the thinner end of the reinforcement into the gap in this back panel, then tighten the screws. This will make the cabinet more stable.

	O×16Sets

If you encounter any of the following issues, please follow the steps below to correct them.

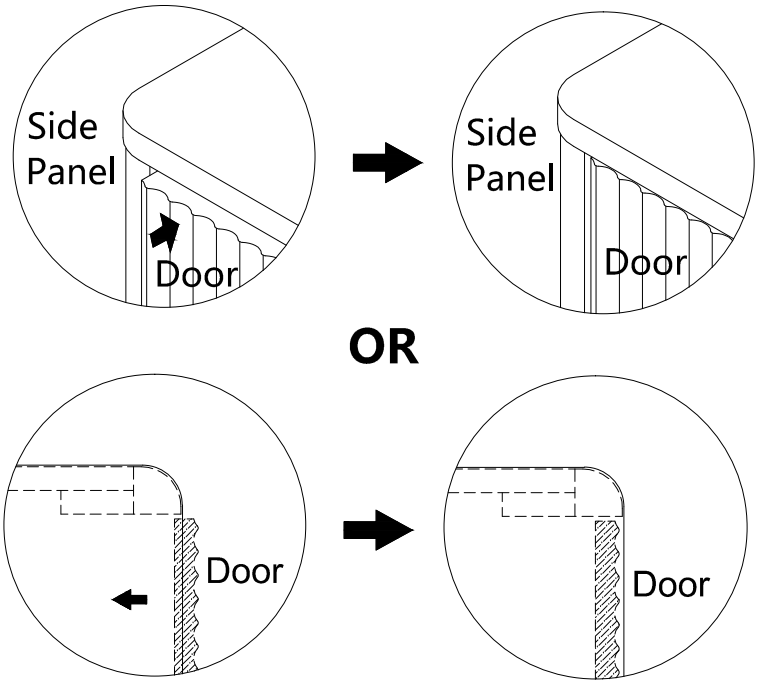

1.The function of the front screw is to adjust the size of the gap between the door and the side panel.

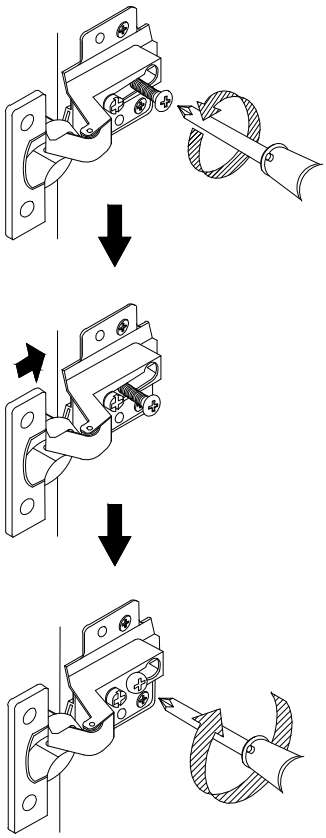

2.The function of the rear screw is to adjust the distance between the front and rear of the door.

Scan the QR code to watch the hinge adjustment video.

installation method

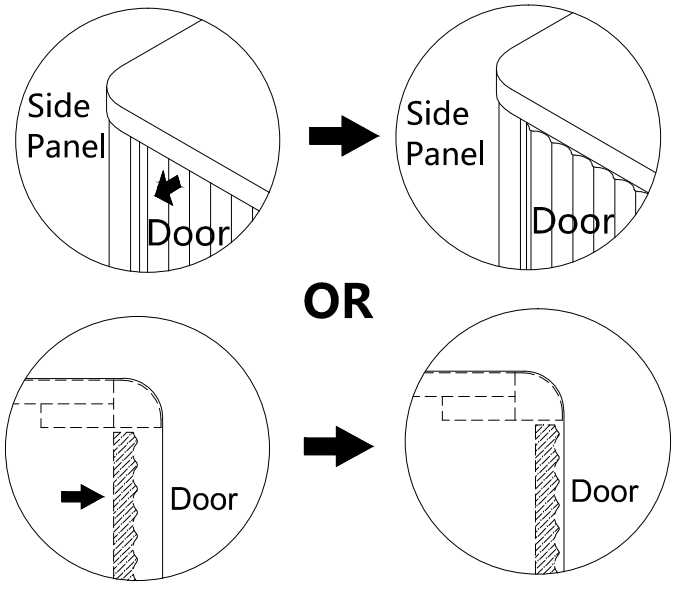

11-A.When the door panel is higher than the side panel.

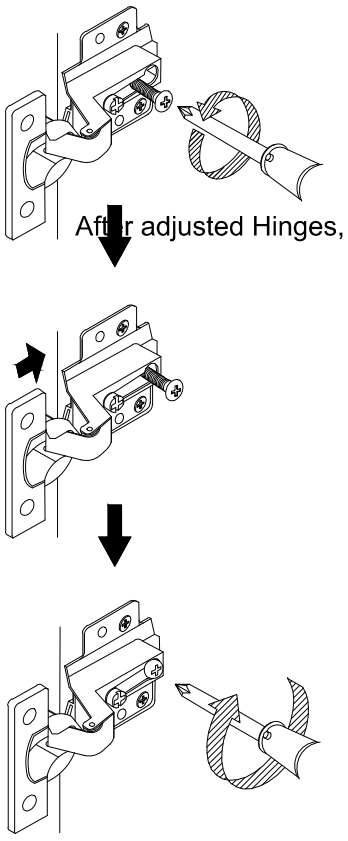

If the gap is too big between side panel and door or the door is over the edge of side panel, loosen the back screw as shown, then move in the door with hinge and tighten the back screw as shown when the gap is just well.

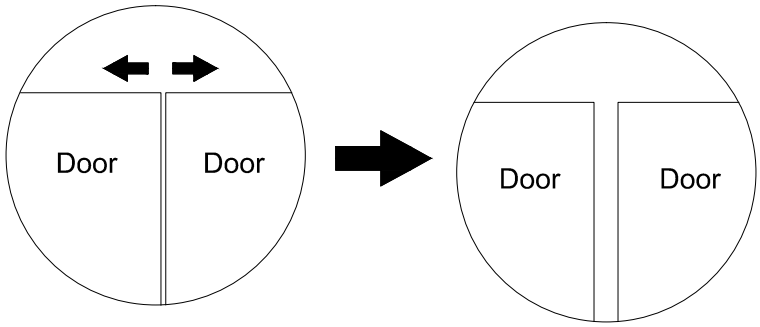

11-B.When the door panel is lower than the side panel, an indentation occurs.

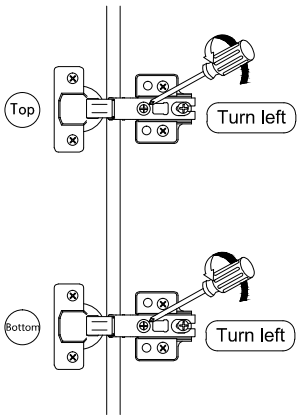

If the gap is too small between side panel and door or the door sank in side panel, loose the back screw as shown, then move out the door with hinge and tighten the back screw as shown when the gap is just well.

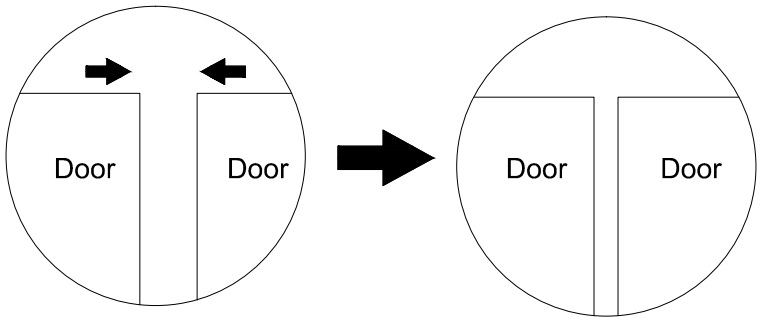

11-C

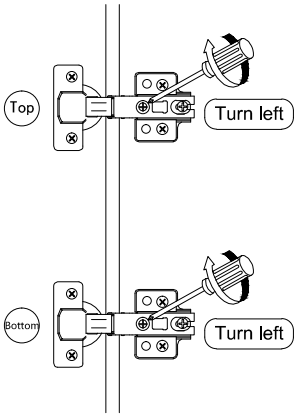

If the gap between the two doors is too small, follow the diagram.

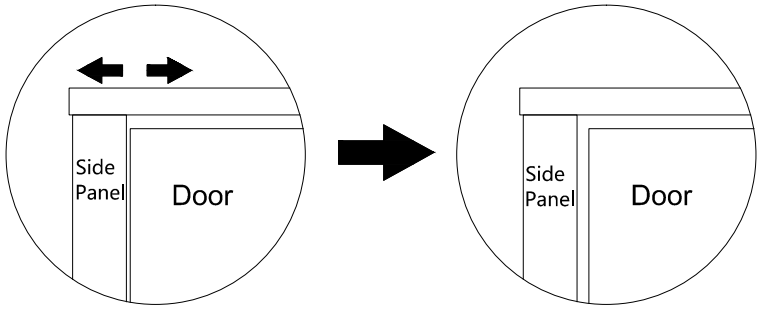

11-D

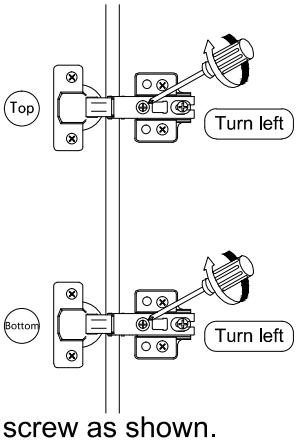

If the gap between the two doors is too large, follow the diagram.

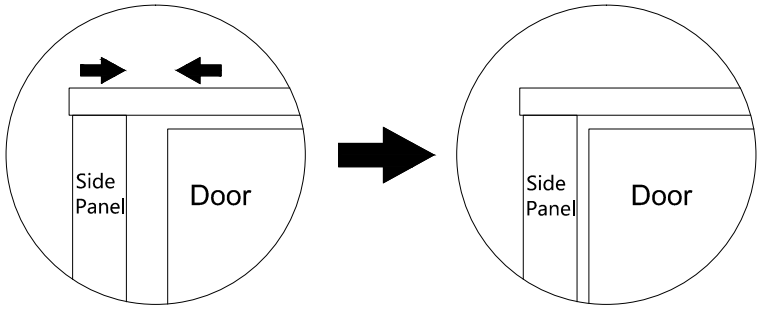

11-E

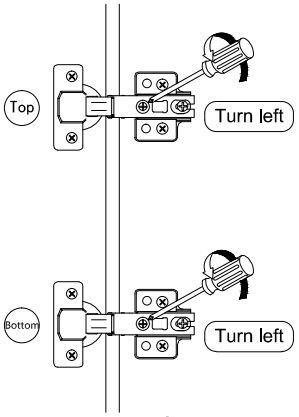

If the gap between the door and the side panel is too small, loose the front screw as shown.

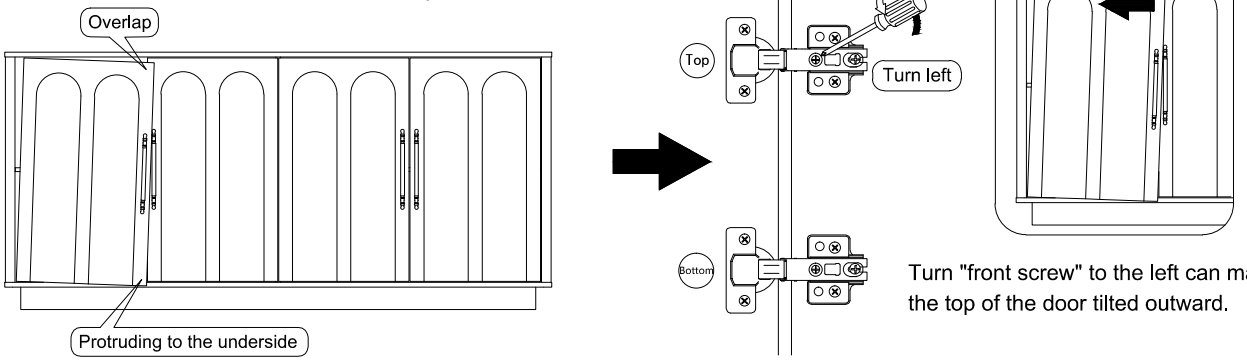

11-F

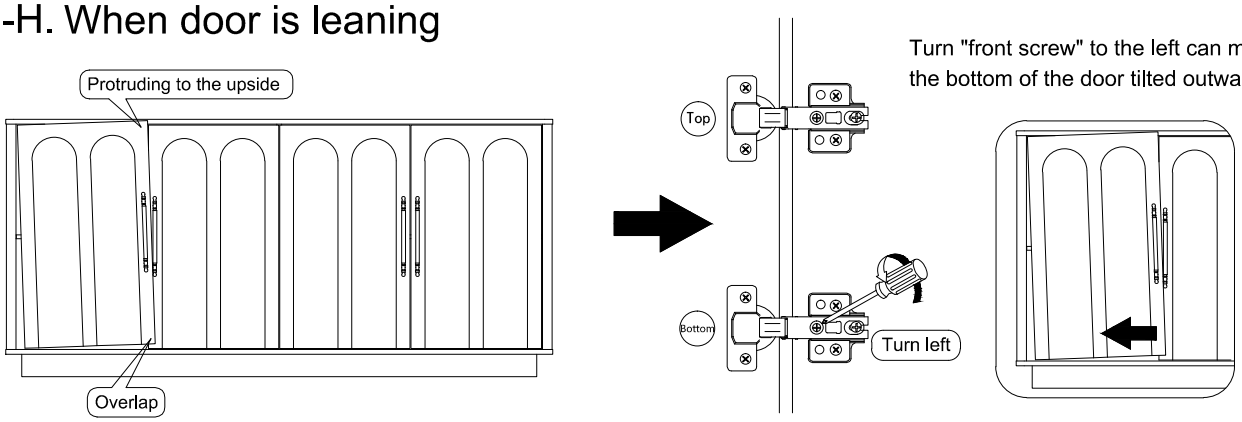

If the gap between the door and the side panel is too large, tighten the front screw as shown.

11-G. When door is leaning

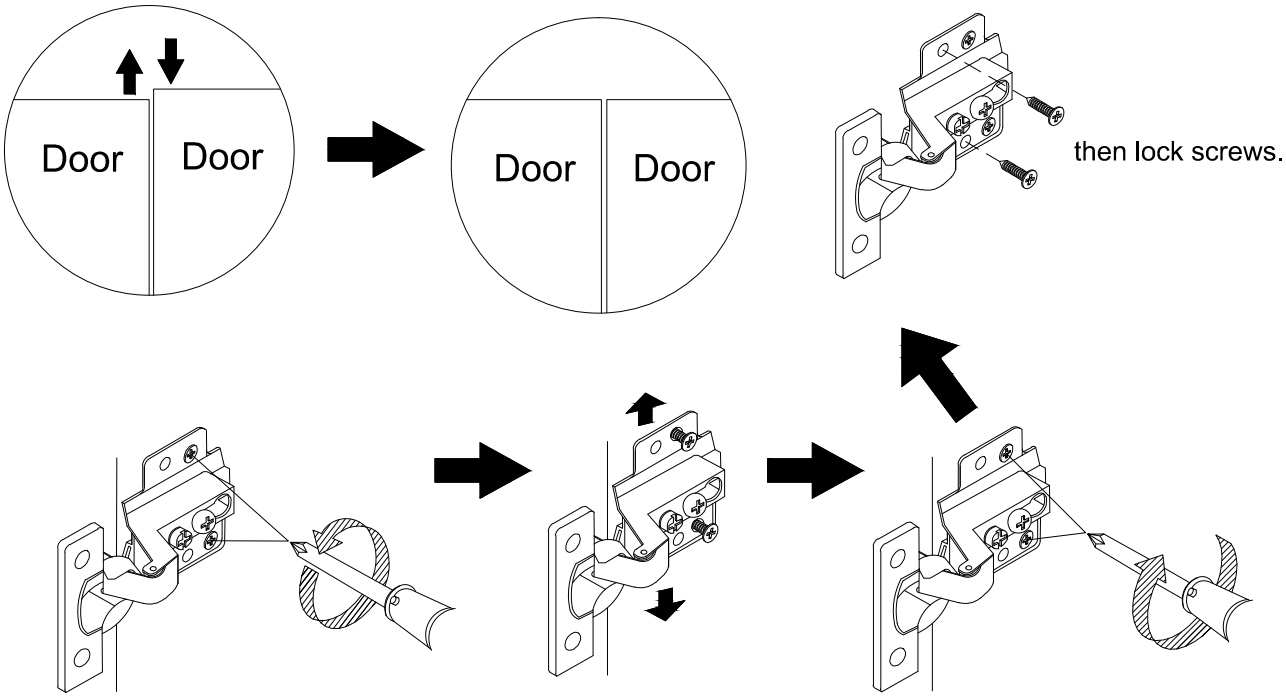

Turn "front screw" to the left can make the top of the door tilted outward.

11-H. When door is leaning

Turn "front screw" to the left can make the bottom of the door tilted outward.

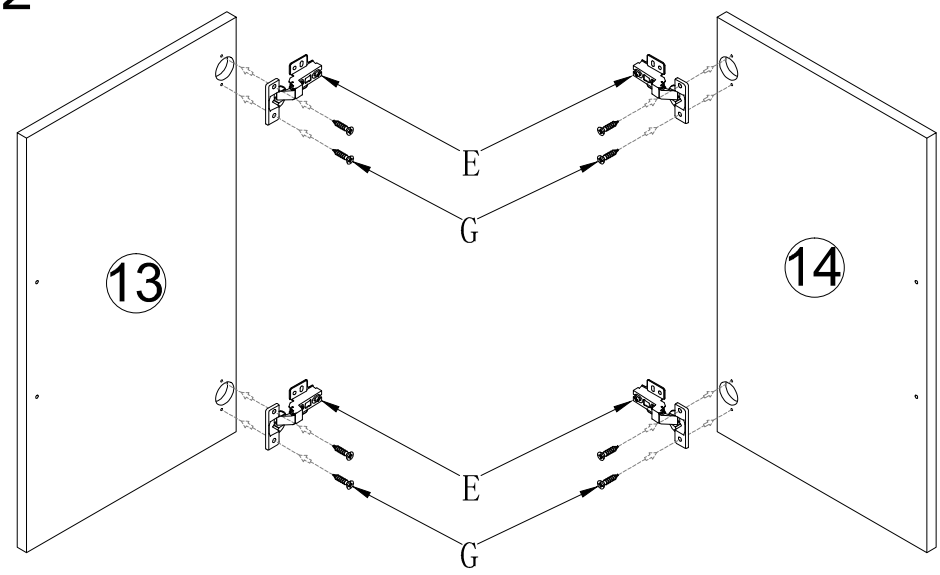

11-I. When the door is higher on top

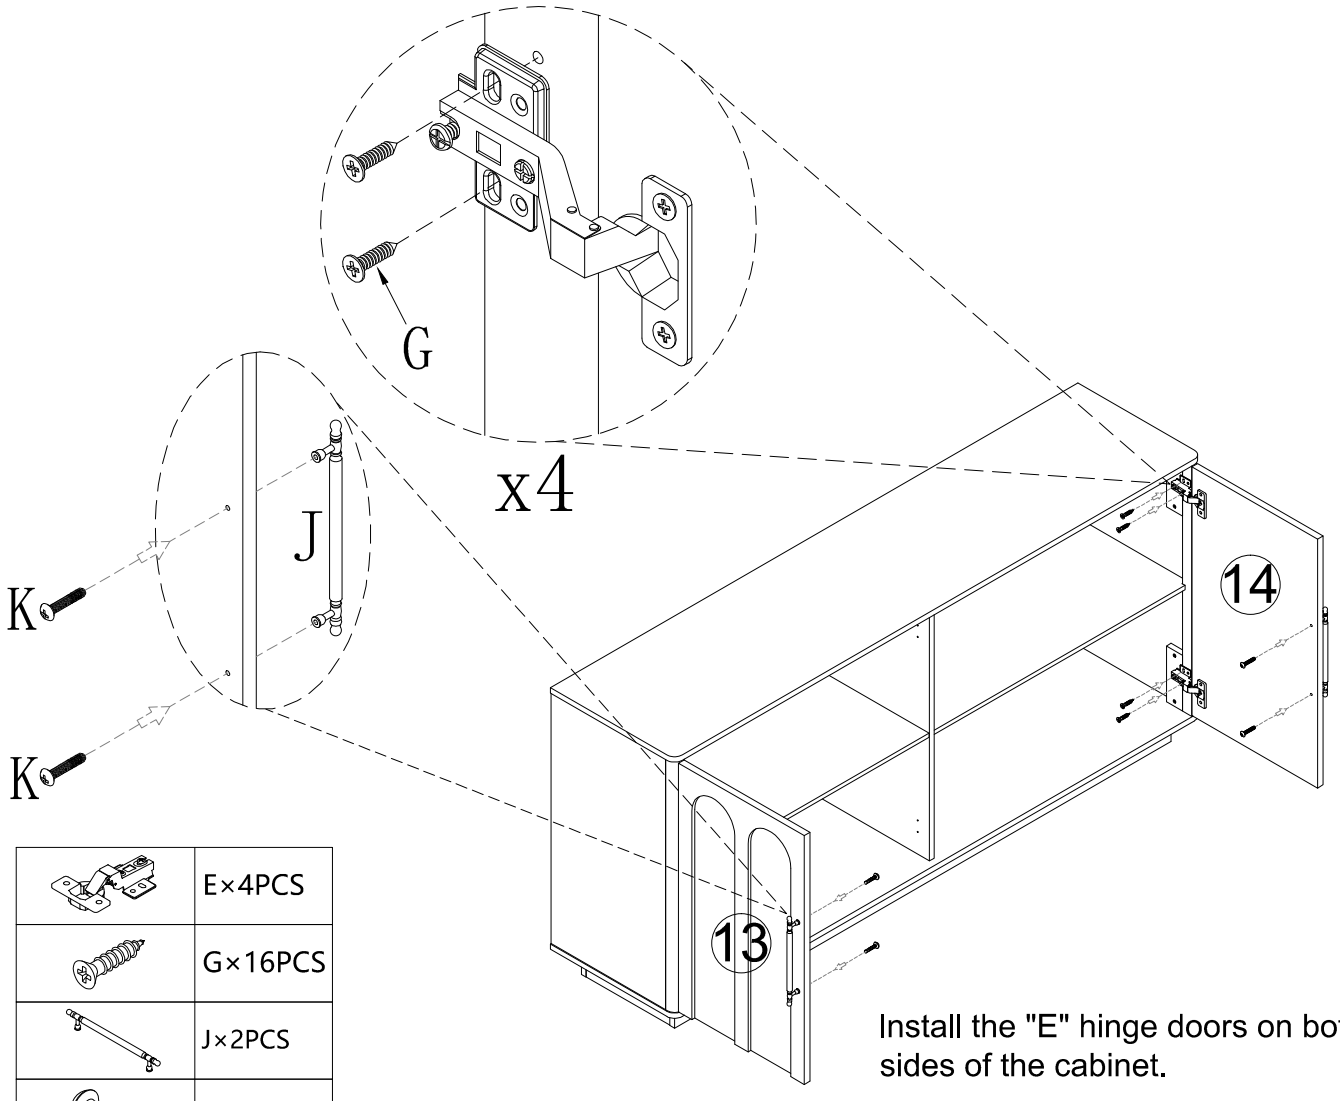

then lock screws.

If the doors are not at the same level, loosen the rear screws on the hinge, adjust the door up or down, and then tighten the screws once both doors are aligned. Tighten the two front screws after everything is in place.
