A schematic diagram of a parallel linkage mechanism. It consists of two long, thin rectangular links connected at their ends by four revolute joints (pin joints). The joints are arranged such that the two links are parallel to each other and to the ground. The top link is connected to a fixed pivot point on the left and another fixed pivot point on the right. The bottom link is connected to a fixed pivot point on the left and another fixed pivot point on the right. The ground is represented by a thick horizontal line at the bottom.

A schematic diagram of a parallel motion linkage. It consists of two long, thin links connected by a revolute joint at one end. The other end of each link is connected to a fixed frame by a revolute joint. The links are oriented such that their motion is approximately parallel to each other.

A schematic diagram of a parallel motion linkage. It consists of two long, thin links connected at one end by a revolute joint. The other end of each link is connected to a fixed frame by a revolute joint. The joints are positioned such that the two links are parallel to each other and to the ground, forming a parallelogram. This configuration ensures that the two links move in parallel paths.
